

Offerings & Capability Overview

Global Cyber Threat Landscape 2022

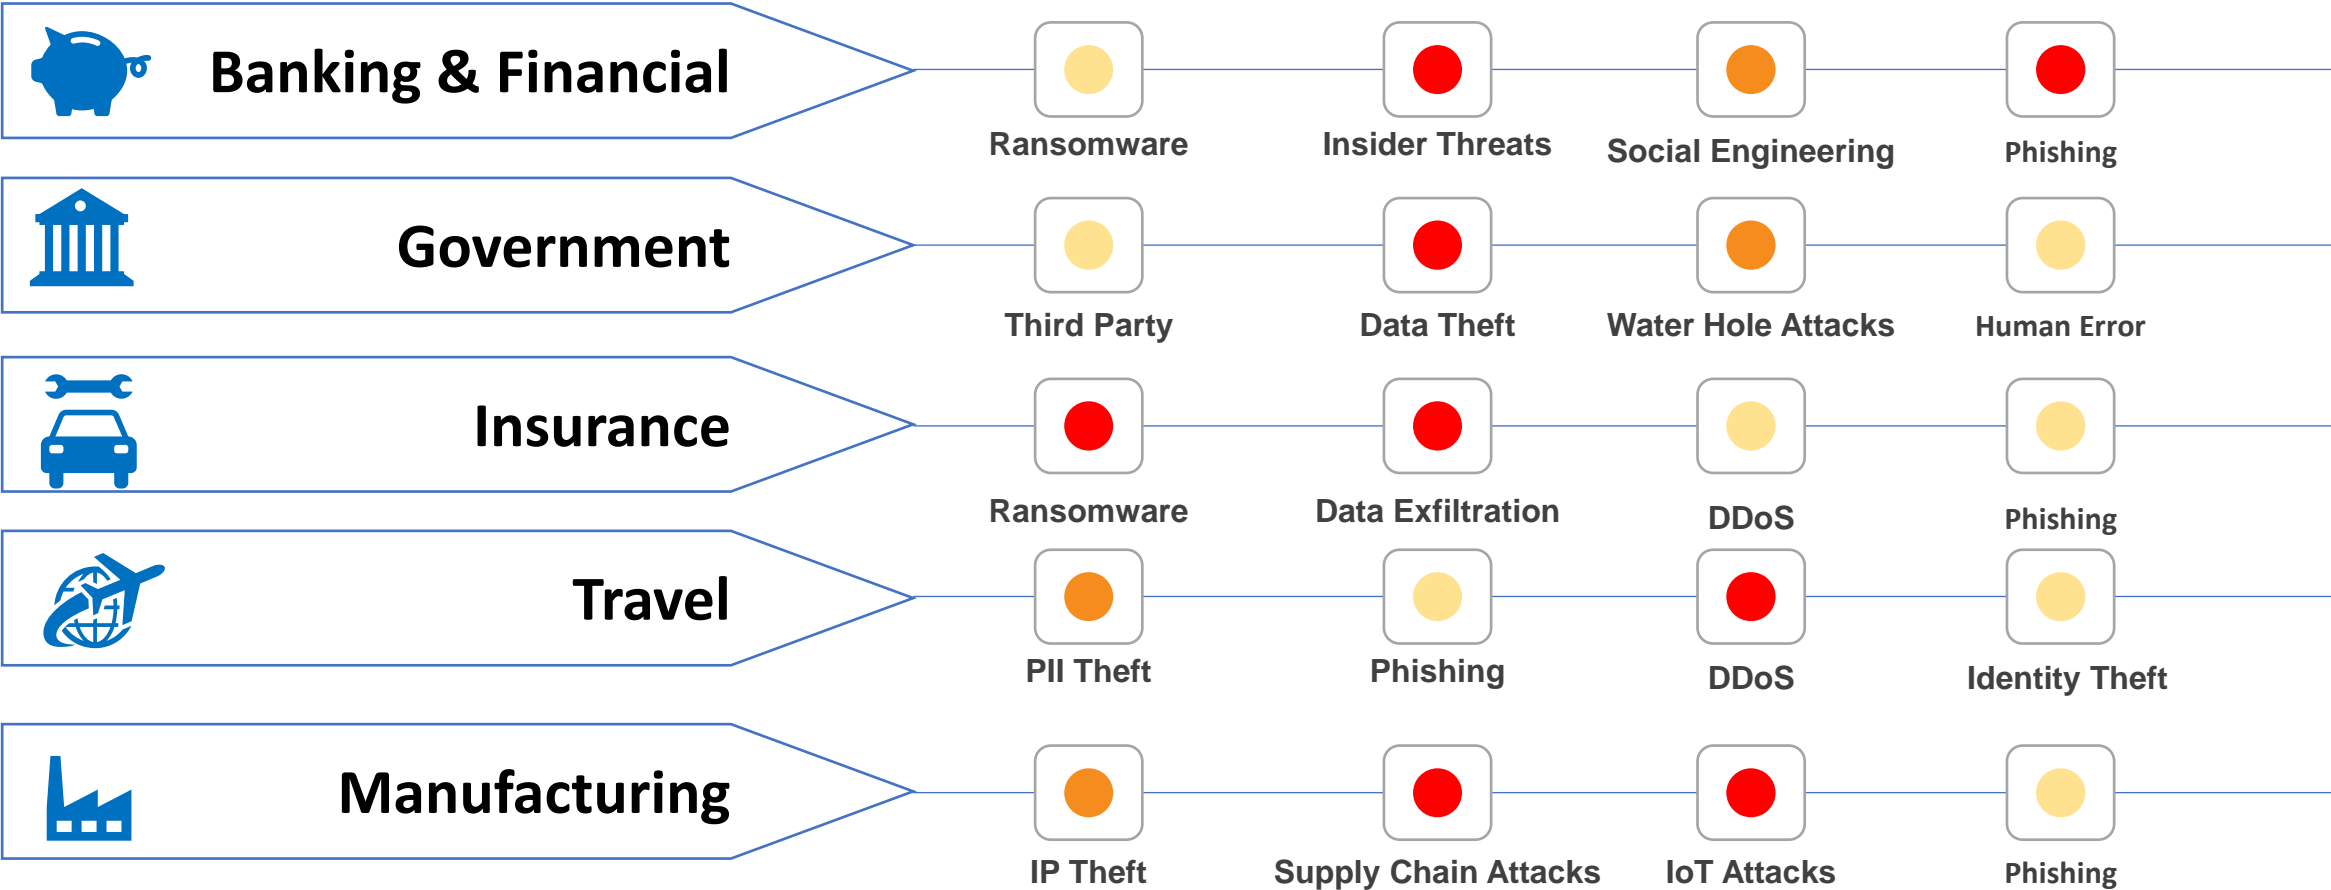

Cybersecurity concerns of cyber leaders

Top three cyber risk concerns of organizations

Industry Wise Threats

Vidyatech Cybersecurity Guiding Principles

Simplifying IT Security through our integrated platform & solutions !!

Protect data – not just devices

1

- **Security is the frontline** of Cybersecurity for an enterprise
- Number and type of **endpoints are growing immensely** and so is the attack surface area
- Organizations should **consider EPP / EDR** as their foremost security activity
- Secure networks and data, which is often the most valuable enterprise asset **require layered security**

Protection and Detection Technologies Are Not Enough

2

- Endpoints now are **not just laptops and desktops**
- Practice required is to **safeguard all entry points** of end user devices
- Devices may include Mobile devices, Printers, ATMs, IOTs as well along with laptops & desktops
- Need of the hour is to integrate workplace security solutions and **give better visibility to administrators and cyber security team**

Move Towards Zero Trust Model

3

- Detection of any threat in time is needed to plan **zero-day threat handling**
- Need is not just Anti-Virus, but, advanced malware, virus protection as well
- **Advanced solutions** can cater to requirements like safer browsing, DLP, Firewall, E-mail protection, social engineering attacks
- **Integration with SOC & ITSM** provide faster detection of any threat and respond quickly

Tools, Technology & Awareness

4

- Strike a **balance between usability and security**— moderate usability with high security
- Consider outside and inside users equal and **achieve zero-trust security**
- **Combat reason for social engineering attacks**-- phishing, unknown downloads
- Reduce chances of getting end users to get exploited
- **Minimize data leakage** or encryption attacks

Our Solutions & Services Portfolio

Workplace Security

- *DLP – Incident Response, Policy Governance & quarantine Email review*
- *Mail security – Securing O365, AIP Implementation*
- *Secure VPN, Cloud Data Loss Prevention*

Threat Intelligence & Threat Monitoring

- *Dark Web & Deep Web Monitoring*
- *Brand Protection*
- *Sec Ops & Vulnerability Intelligence*
- *Third -Party Risk Management*

Phishing Defence Analysis & Training

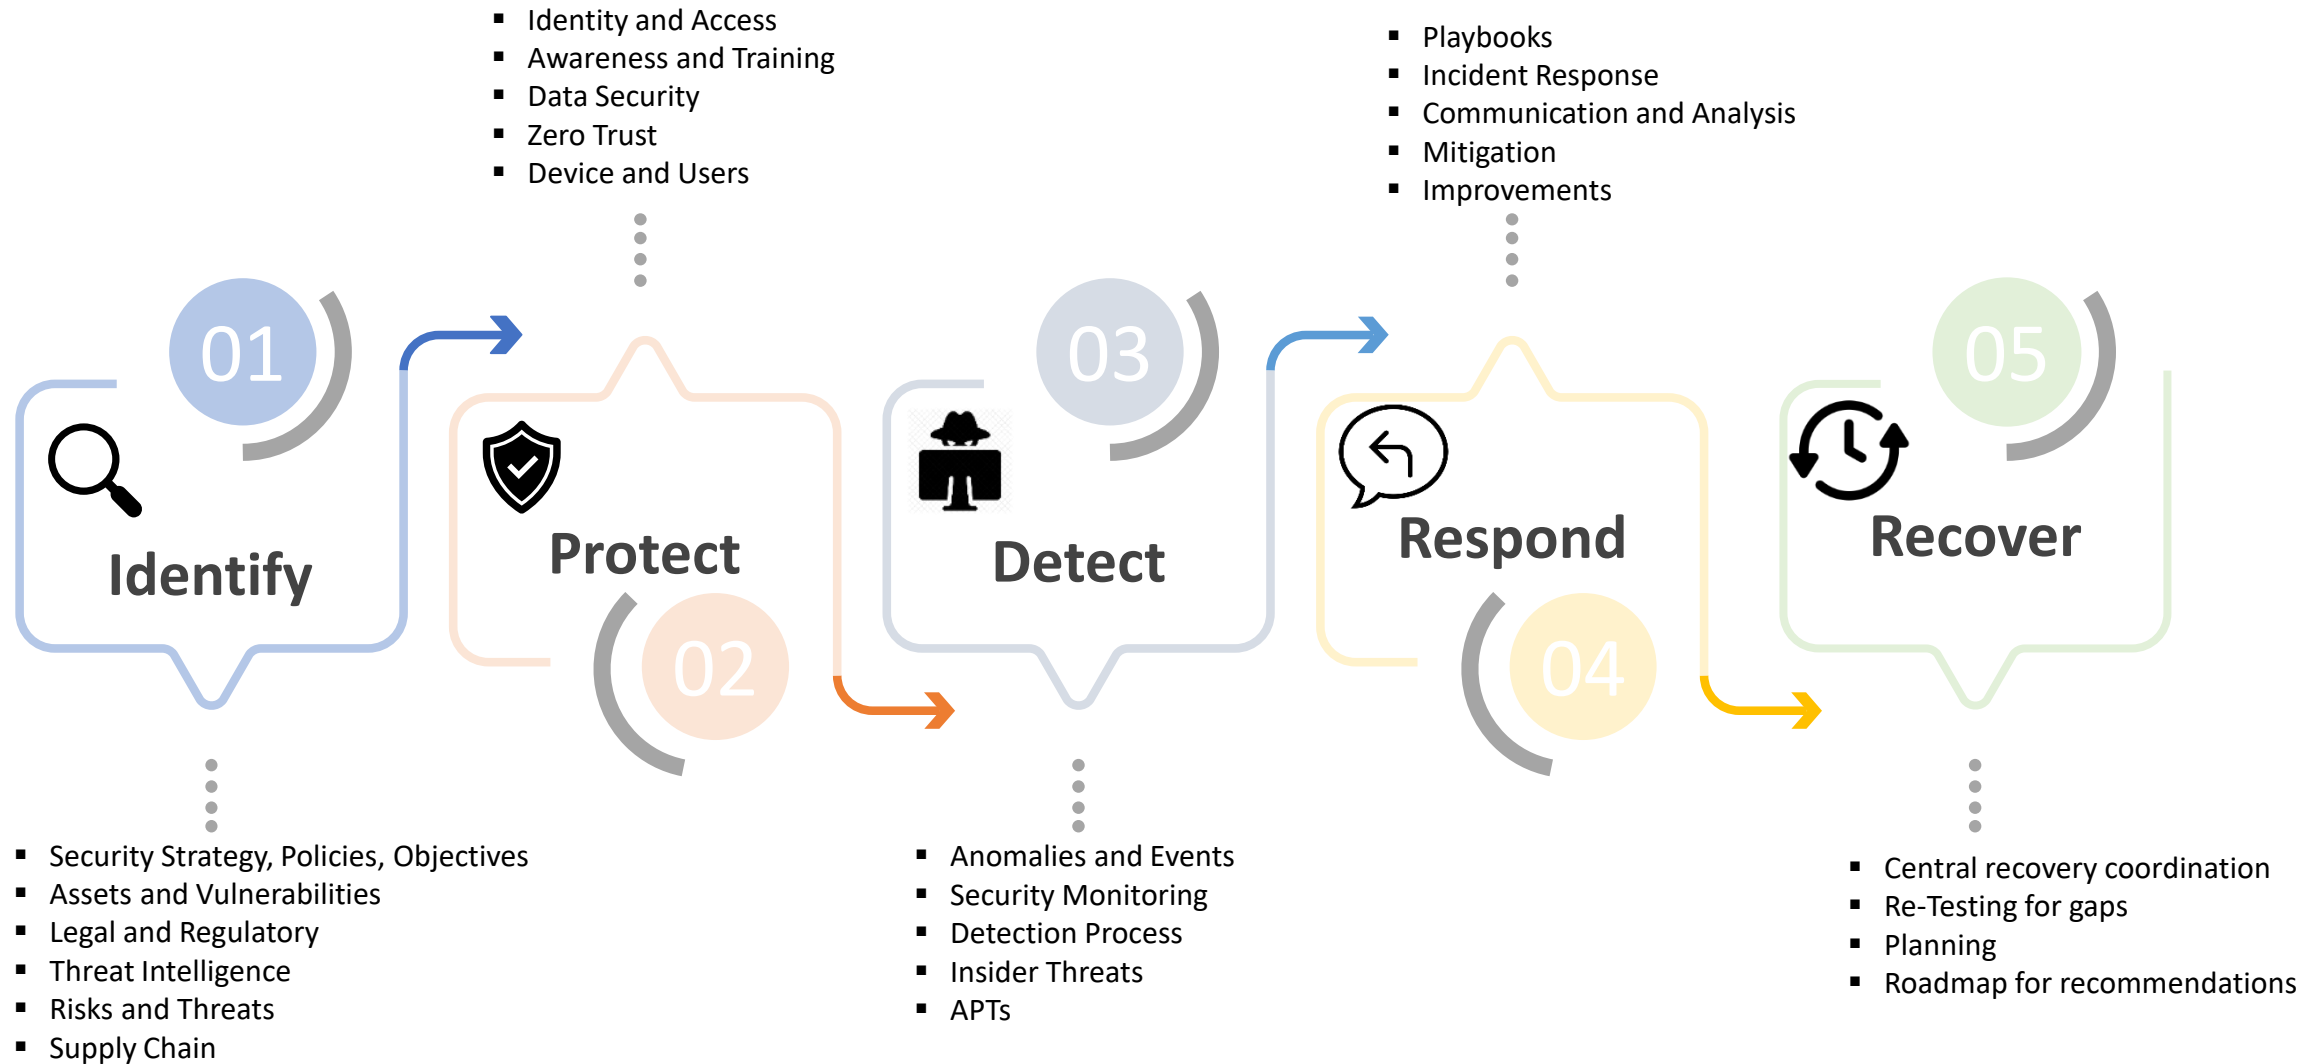

- *Proactive Phishing Defence*
- *Phishing Simulation & analysis*
- *Prevention of phishing attacks*
- *Reporting*

Governance, Risk Mgt & Compliance

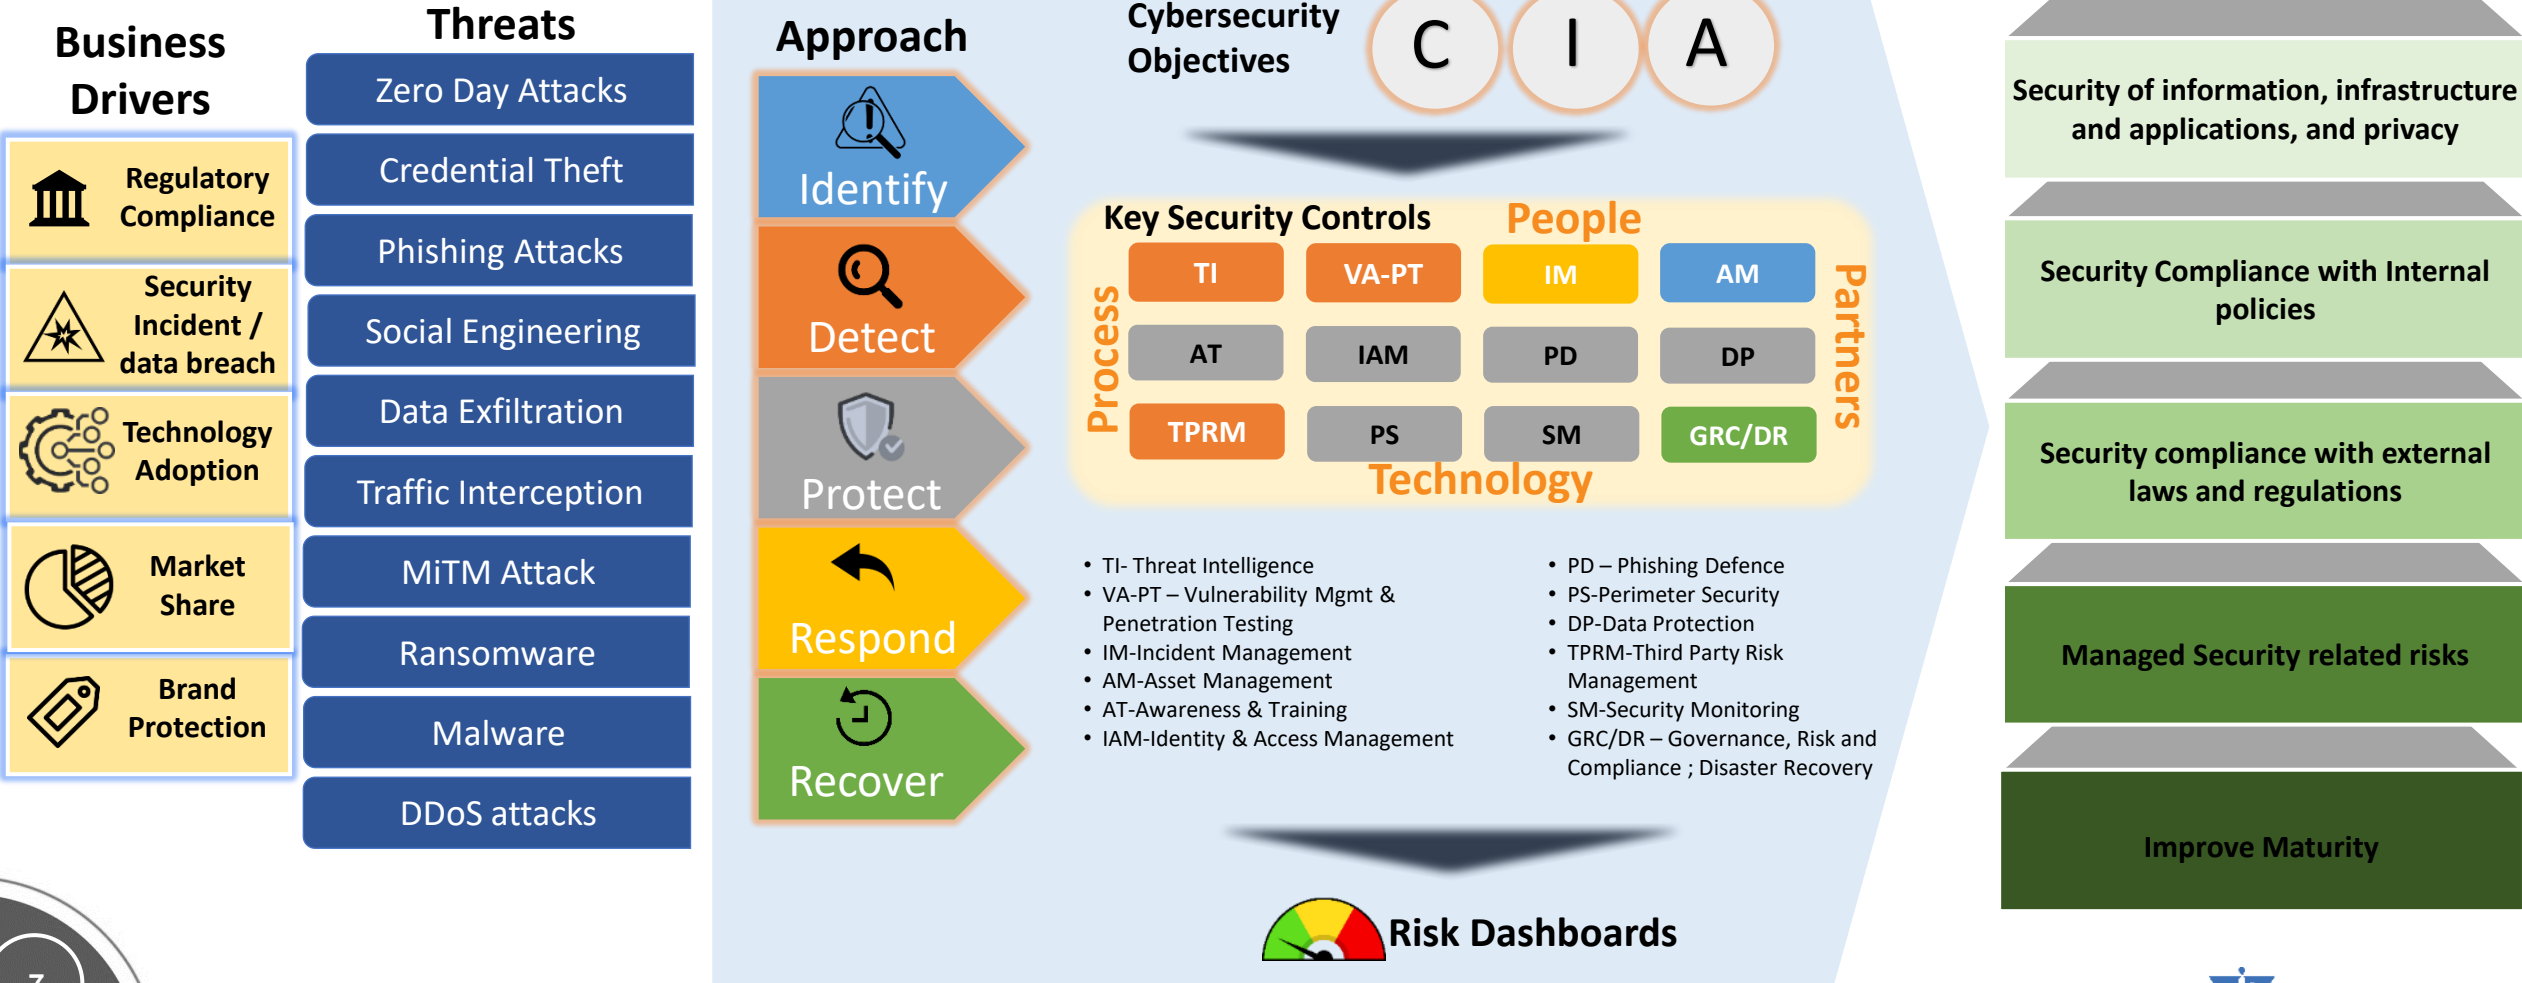

- *Risk dashboard*
- *Compliance & Maturity assessment*
- *Third -Party Risk Management*

Cybersecurity Lifecycle and Vidyatech Capabilities

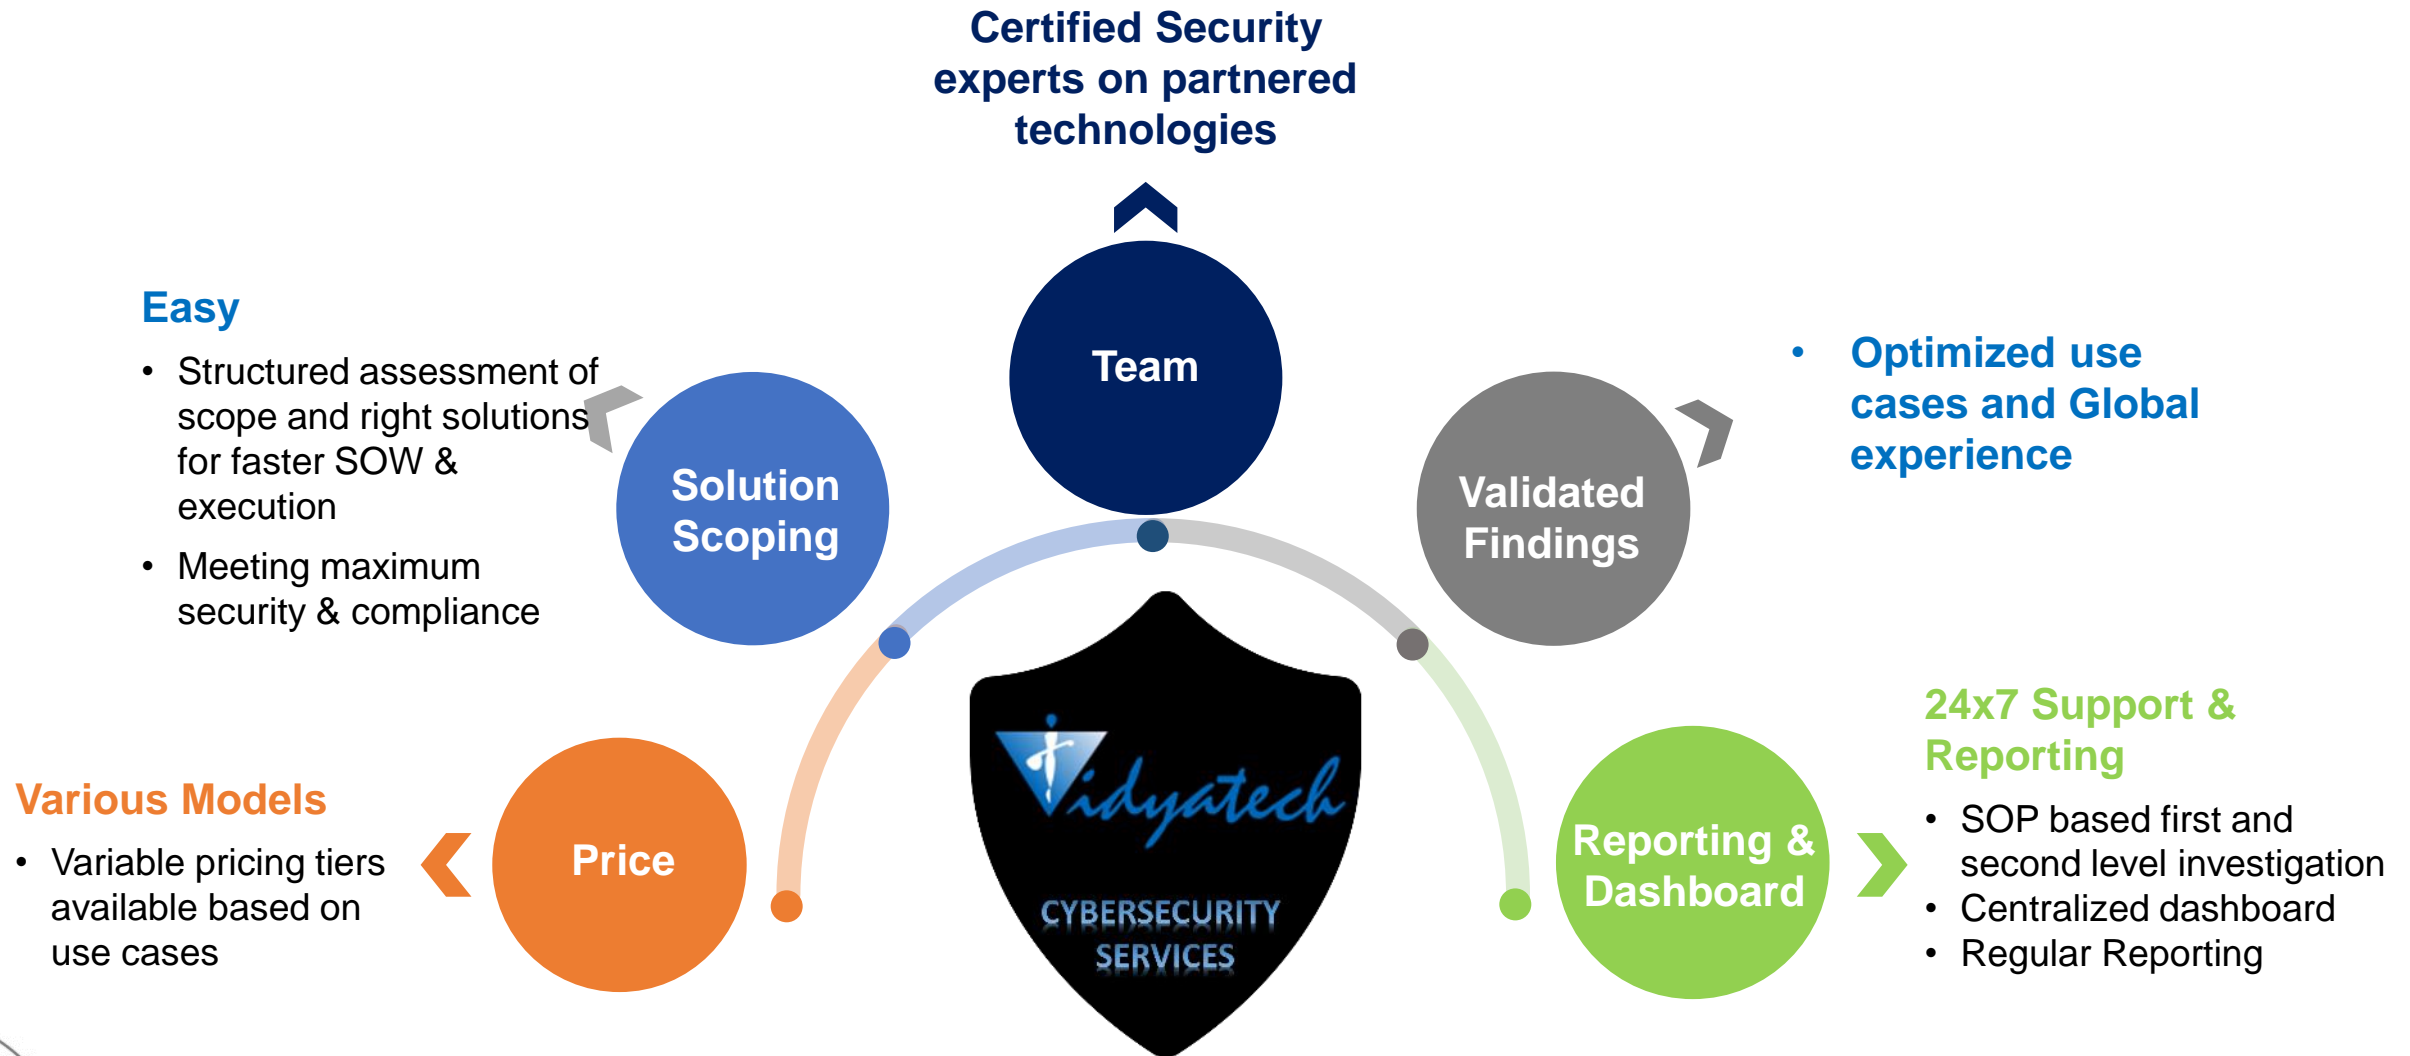

Vidyatech Cybersecurity Reference Framework

(Aligned to industry standards & best practices like NIST,ISO27001,Cobit,CMMI)

Vidyatech Differentiators

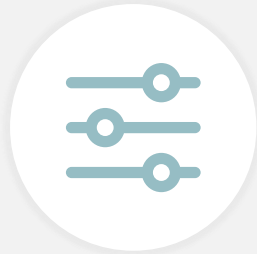

Security & Compliance @ Vidyatech

Operations Controls

- Security Training
- Clean Room
- Locked Systems
- No Data download
- Segregated network
- NDA & Checks

Internal Controls

- Access Control
- Secure Log-on
- Restricted programs
- Content filtering
- DLP
- Encrypted Laptops

Security Audits

- CISO (Internal Audits)
- QMS (Internal Audits)
- External assessments

Compliance

- ISO 27001
- NIST Framework alignment
- SOX

Some of our Customers

Bank of Maharashtra

Values Delivered

'Automation first' approach with continuous Innovation lead to Next-Gen Security.

Upto 32% reduction in L2/L3 effort through auto remediation & smart automation

>3 maturity level achieved within first year.

Orchestration library based remediation.

Verticalized use cases

~25% attack surface reduction

Cross functional architecture leverages existing investments in various DLP solutions

Security & Compliance using Standards & Controls leading to Increased Security Effectiveness

THANK YOU
