# DashMagiq®

Special Use Cases in DashMagiq® for IR

Centralized incident workflow for all data leak prevention technologies and sources (DLP, EDR, EPP, Mail)

- *Two-way Incident status update and escalation of Incidents (Incident status updates in DLP platform with appropriate comments)*
- *Getting inputs from various stakeholders in a structured role-specific questionnaire so that each incident has a case file ready for any due diligence audit*
- *Integration with any email security software*
- *Automatic escalation and reminders according to the organizational hierarchy maintained in the AD or equivalents.*
- *Correlation capability between NDLP and HDLP alerts*

Orchestration & Contextualization of information to Analysts for faster decision making
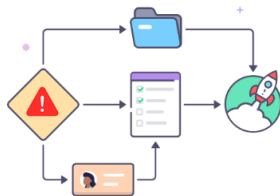

- *Refer similar incidents in past on a click*
- *URLs grouped together*
- *Historical details of actions on similar incident*
- *data enrichment like Full user-name, manager details etc.*
- *viewing of files being exfiltrated, etc.*

Release of Quarantine emails

- *Ability to provide approval giving appropriate justification through structured questionnaire for central evidence capture*

For special business purposes, allow temporary time-based exception to specific users for blocked actions:

- *USB Copy Block (Outbound) for sensitive data as configured in DLP rule*
- *Email blocked for sensitive data as configured in DLP rule*
- *Print blocked for sensitive data as configured in DLP rule*
- *File upload to web blocked for sensitive data as configured in DLP rule*
- *File upload to Cloud based apps like Google Drive, OneDrive*
- *Network file copy block for sensitive data as configured in DLP rule*

Computation and reporting of Risk Score and Potential Loss Averted by the DLP

- *Customizable DashMagiq® dashboard with a single view of data security*
